## WIDGET HELP

Controls layer visibility in the map viewer and accesses Attribute Tables.

Displays symbology for visible layers on the map.

Sets the basemap for the viewer.

Measures distances or areas and point locations.

Prints map view to format with advance settings available for resolution, size, and scale.

Displays overview of area shown in the map viewer. Can be min/maximized by arrows in lower right corner.

Saves a bookmark of the map extent. Customize the name and return to projects in one click!

Creates simple graphics for custom display.

Add data to the map from ArcGIS content, map services, or local content. Data is not saved outside of session.

Selects features to perform actions on. Check specific layers for analysis.

Contains all tabular data associated to map layers. Can be viewed from the bottom of the map viewer or in Layer List.

Filters features by custom expressions or by map viewer extent.

Entire table or selected features can be exported into a .CSV for use outside the Data Hub.
